Vertaling van de EVOA codes naar douanegoederencodes.

Datum 21 oktober 2008 Kenmerk LvdP

In this overview you can find the translation from Basel codes to customs codes. Unfortunately There is not always a direct relation between a customs code and the Basel code.

Please find below an explanation of the table.

- 1) One code in the column **Customs code (HS)** means that the custom code can be direct translated in a Basel code.
- 2) An **ex** in front of the customs code in the column **customs code (HS)** means that the most common Customs code is reproduced.
- 3) Is there nothing mentioned in the column **Customs code (HS)**, the cell is pink, than there is no suitable customs code.
- 4) Are there more customs codes in the column **Customs code (HS)**, with and without **ex** that means that the code without the **ex** the most correct customs code is and the code with the **ex** also possible is and often use in practice.
